The Public Health and Safety Company™

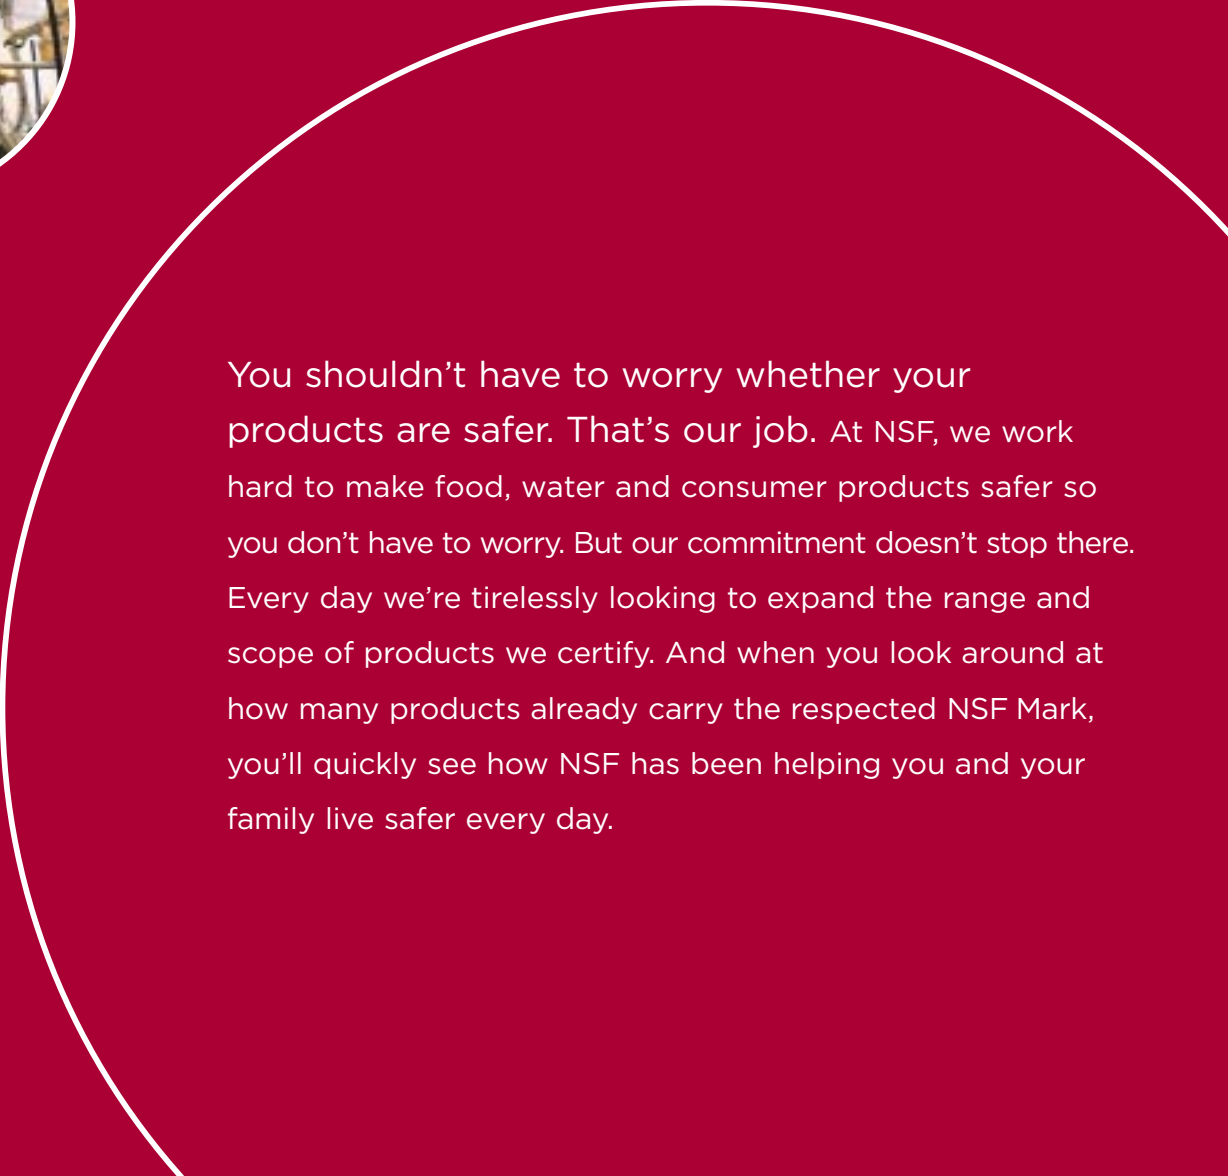

FEEL

SAFER

NSF International helps protect you by certifying products and writing standards for food, water, air and consumer goods.

You shouldn't have to worry whether your products are safer. That's our job. At NSF, we work hard to make food, water and consumer products safer so you don't have to worry. But our commitment doesn't stop there. Every day we're tirelessly looking to expand the range and scope of products we certify. And when you look around at how many products already carry the respected NSF Mark, you'll quickly see how NSF has been helping you and your family live safer every day.

EAT

SAFER

Whether you're preparing your family meal at home or dining at your favorite restaurant, rest assured that you're eating safer because of NSF. From food processing plants to food preparation tables at restaurants to the utensils and appliances found in your kitchen, NSF is the most widely recognized and respected third-party certification provider in the world. As a leading food safety auditor, NSF has played a critical role in the development of today's food safety standards.

NSF's Fresh Check™ program helps assure that the perishables you buy from the grocery store are fresh.

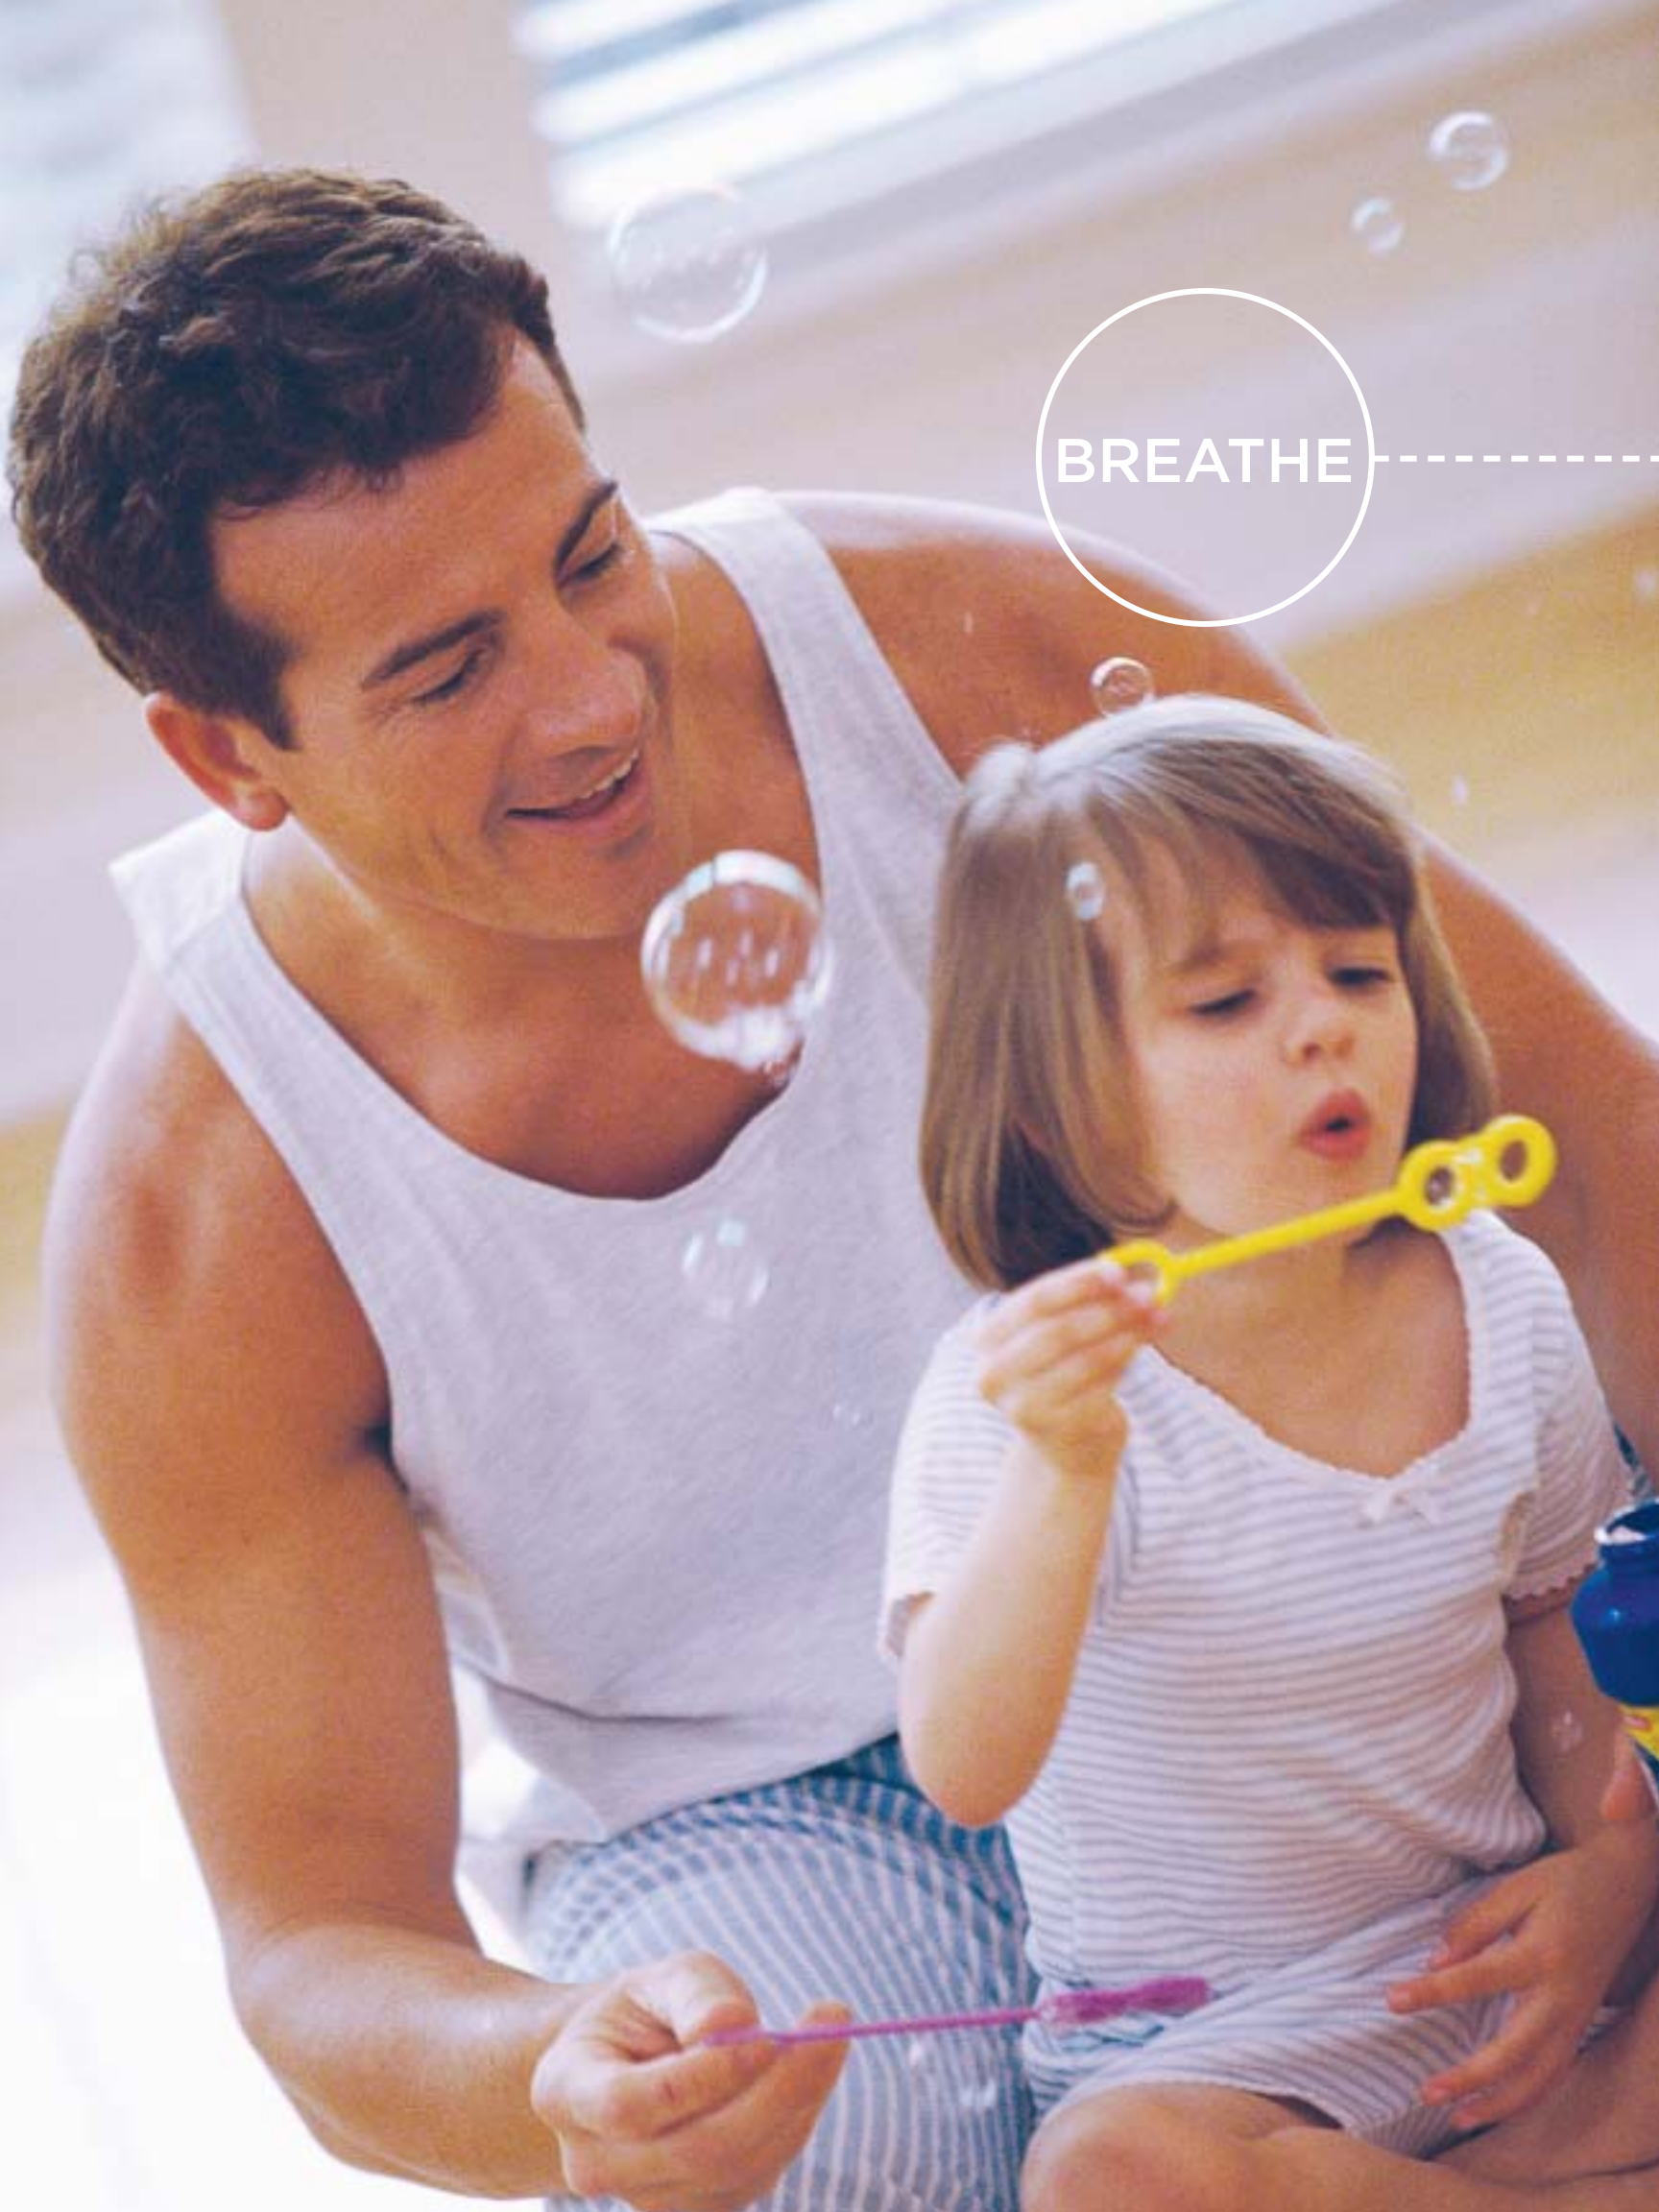

**DRINK**

**SAFER**

Next time you're shopping, look for the NSF Mark.

Filtered, bottled or on the rocks – however you prefer your water, NSF certifies it. Try to imagine all the ways water is a part of your daily life. Ice cubes, faucets, water coolers, indoor plumbing, water filters, hot water dispensers, bottled water – the list goes on and on. Fortunately, so does the list of water and water-related products that NSF certifies. From water treatment facilities to home water filters, and everything in between, NSF certifies products and writes standards that allow you to drink safer.

BREATHE

SAFER

You'll breathe over 3,000 gallons of air today. And since people spend on average nearly 90% of their day indoors, indoor air quality is a growing concern. At NSF, we're conducting ongoing research to make indoor environments safer. As the only World Health Organization Collaborating Centre for food, water safety and indoor environment, NSF strives to provide insight, education, knowledge and resources to help everyone breathe safer.

As the number of people with asthma, allergies and other respiratory illnesses rises, indoor air quality is a growing concern.

When buying anything from dishwashers to dietary supplements, be sure to choose products that have chosen NSF. The NSF Mark can be found in over 80 countries on over 100 million products. Finding the mark means that you've found a product whose manufacturer has a deep commitment to public health and safety. The range and scope of products and industries that NSF certifies is continually expanding, so keep an eye out for the mark on products you use every day. Living safer has never been easier.
